SiOH per 100g silica). Part of these groups reacted with organic reagents forming organic derivatives of silica with Si-O-C bonds. Acetyl and benzoyl derivatives of silica were prepared which were organophilic and rapidly hydrolizable by water. Silica chlorides were prepared by treatment of silica with SOCl_2 (50 to 80 meq. = SiCl per 100g silica) or with SiCl_4 (= Si-O-SiCl₃ groups). Alkoxy derivatives of silica were prepared by treatment of silica chlorides with different alcohols. These derivatives were organophilic and part of them hydrophobic.
